CORPORATE LEARNING PLATFORM

We turn training into the language of your business

We have been building corporate academies since 1992. Today 2.5M employees open InfinityLMS on an ordinary working day.

BETT · INFINITY E-LEARNING

Thirty years on the same job

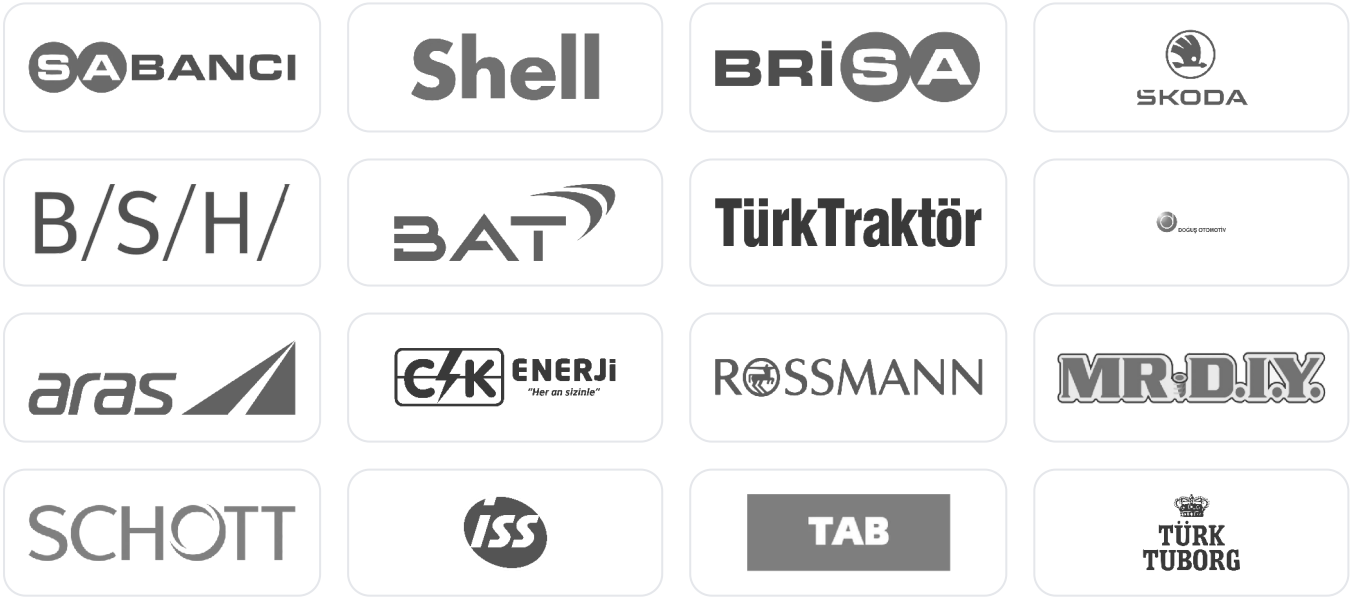

We started in 1992, producing training on CD-ROM. Today we build corporate academies end to end: platform, content, artificial intelligence and measurement under one roof.

The academies of Türkiye's largest manufacturing, retail, energy and healthcare groups run on our platform. 300+ organizations, 2.5M active learners, 95% contract renewal rate.

Our own team writes the software. Implementation, migration, training and support come from one place, with no integrator layer in between.

A FEW OF THE ORGANIZATIONS WE WORK WITH

InfinityLMS

Assignment, classroom planning, exams, certificates, mobile access and reporting live in one system, so your team stops moving data between tools.

Assign and track

Build groups by role, location or hire date. Reminders and escalation run on their own, and the completion rate is visible while the programme is still open.

Blended by default

E-learning, classroom sessions, virtual classes, SCORM packages and video sit in the same programme. Attendance, exam results and certificates follow the employee.

Reporting that reaches the board

Training hours per employee, compliance coverage, cost per hour and the gap by unit come out as a ready report.

Mobile academy

Field staff sign in with SSO or a QR code, download a course, finish it offline and sync when they are back online. iOS and Android, under your own brand.

Learner portal · interface shown in Turkish, available in 8 languages

From procedure to published course

Most corporate knowledge already exists as a document: a procedure, a policy, a recorded meeting, a slide deck nobody opens. Fourteen AI modules inside InfinityLMS turn that material into something an employee can complete.

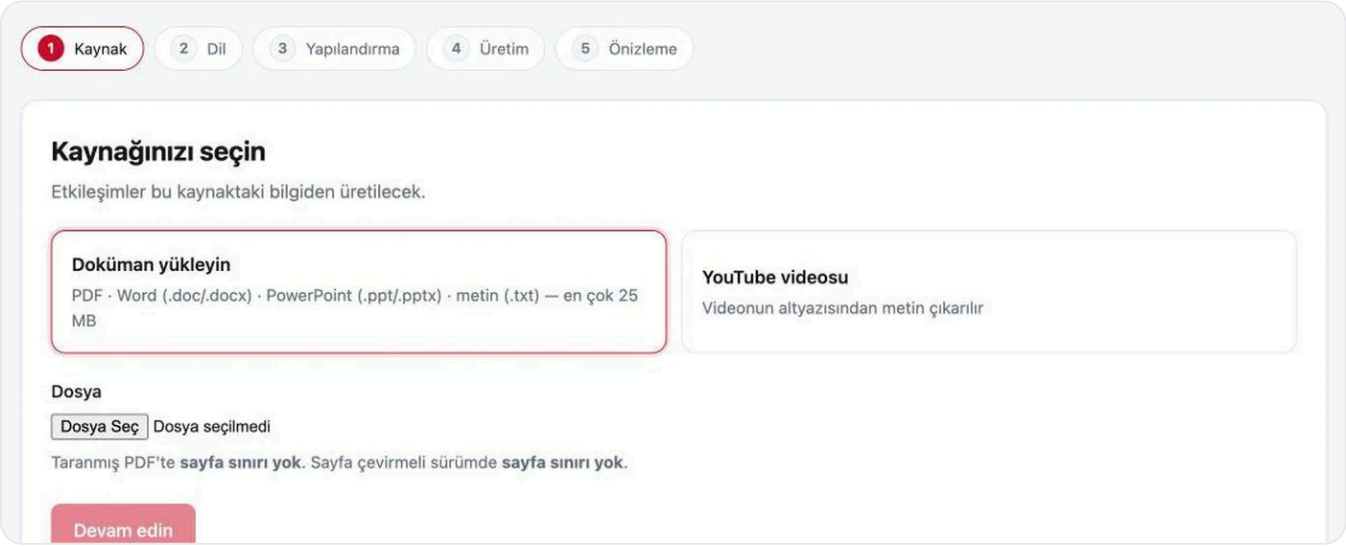

The decision stays with people. AI writes the draft, your subject matter expert corrects and approves it, and nothing publishes itself.

1 Upload the source
A procedure, a slide deck, a video or a transcript. No template required.

2 AI drafts the course
Sections, narration, on screen text, questions and a voiceover in your chosen language.

3 Your expert edits
The expert corrects what is wrong and approves the rest. Nothing goes live unapproved.

4 Publish and assign
The course goes live in your academy as SCORM or native content.

Course generation from a document · interface shown in Turkish

An employee who never decides has not learned

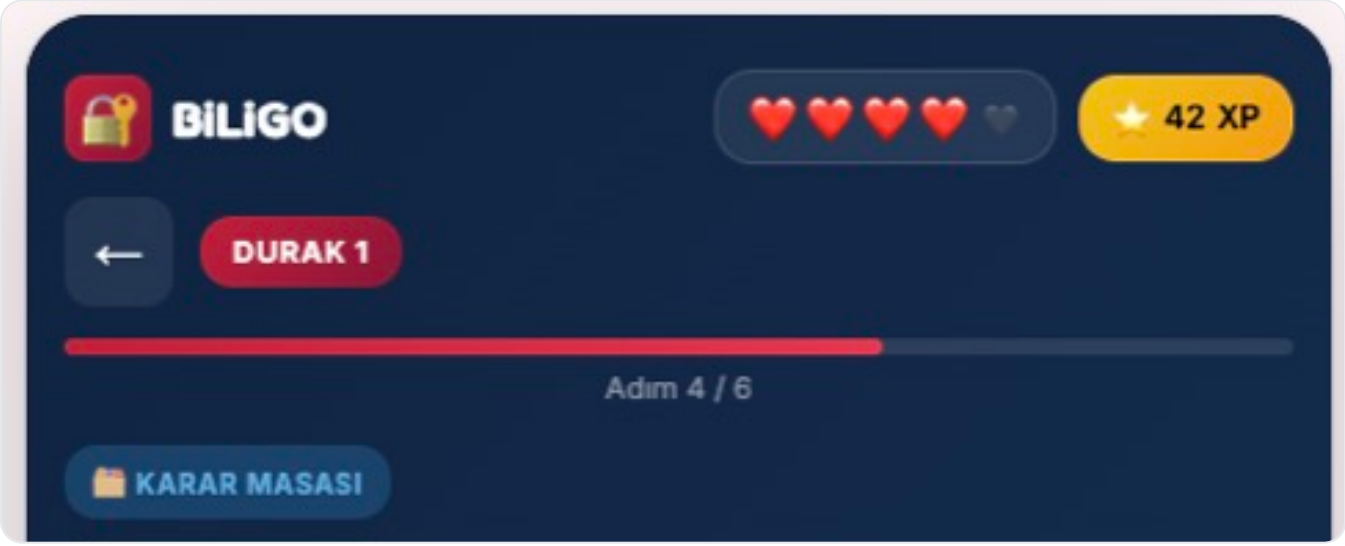

A worker can recite the confined space procedure and still get hurt, because the shop floor asks for a decision under pressure rather than an answer to a question. Our games put that moment inside the academy.

Biligo

Turns a course into a gamified journey. The employee makes choices in real work scenarios and sees the result immediately. Scenarios of around three minutes, fully integrated with InfinityLMS.

VakaSim

Business simulations written with AI. Enter your sector and your subject, pick one of the cases it proposes, approve it, and a playable decision simulation goes live in your academy.

Ready catalogue and your own material

2,000+ ready courses in occupational safety, compliance, leadership, digital skills and language. Licence the catalogue, or use it next to your own content.

If you want original material, our studio takes it on: script, voiceover, animation and SCORM packaging. Every package we produce stays your property.

Competency mapping

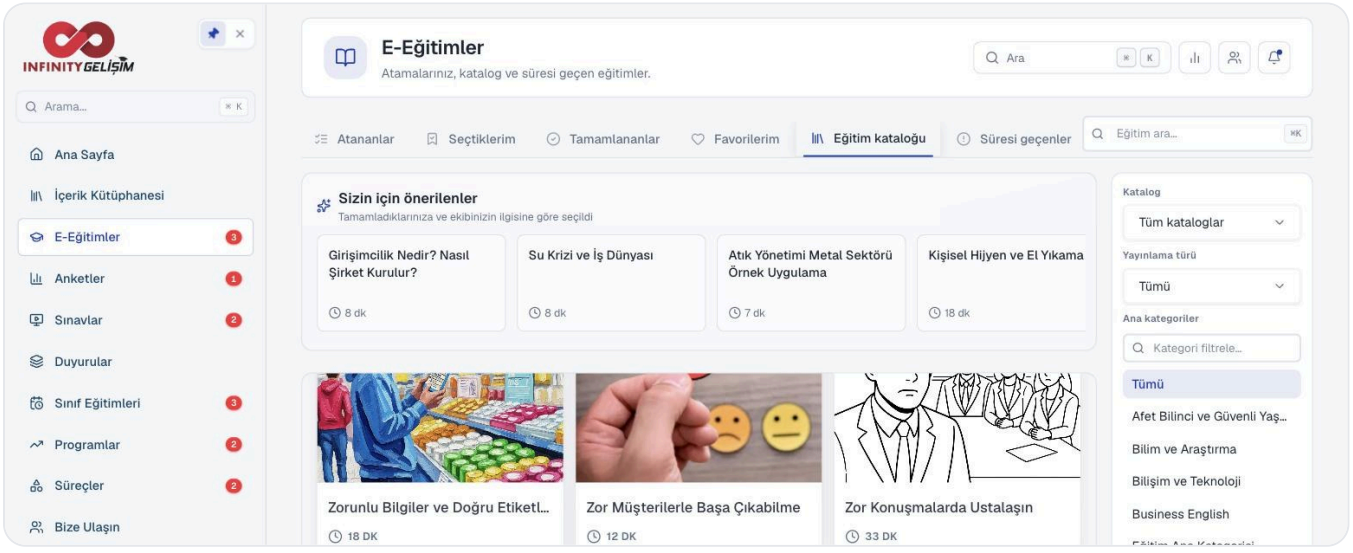

Every course is linked to the competency it feeds, so a development plan starts from the gap you want to close rather than from a course list.

New content every week

The catalogue keeps moving; a subject that enters the agenda becomes a course in the same week.

Eight interface languages

In multinational teams each employee works in their own language while reporting stays in one place.

Turning training hours into management language

When a training budget is defended, the question is not the completion rate but what happened to the business. Our LearnOps approach puts learning data next to a business indicator.

Incident count, scrap rate, customer complaints, sales conversion: whichever indicator matters to you, the learning data is written beside it. When an assumption fails we do not produce a number, and we say so in the report.

Ready management report

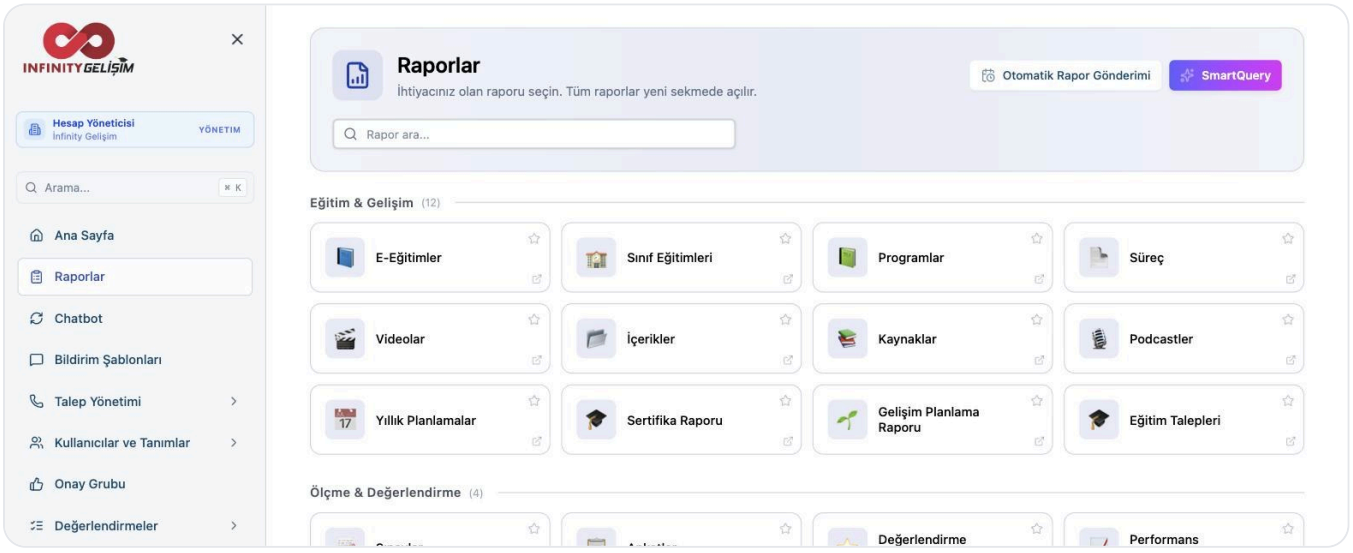

Hours per employee, compliance coverage, the gap by unit and cost on one screen.

Ask your reports a question

Type the question in plain language, get the table and the chart. The manager stops waiting for the analyst.

Customer health

If usage drops we see it too, so contract renewal holds no surprises.

Let us talk

Write a line about what you need the academy to do, and we answer within one working day. The first call is a conversation rather than a sales deck.
